

7-Band OCF Antennas

Buckmaster 7-Band 300 Watt OCF Dipole Antenna (Click for larger image)

Our 7-Band antennas cover **80, 40, 20, 17, 12, 10, and 6 meters**, with no tuner required! Wire antennas are a great simple way to work 40M and 80M rather than a noisy vertical antenna that requires horizontal radials. Our 7-Band antennas are OCF (off-center-fed), with a 45 foot leg and a 90 foot leg, totaling 135 feet. With the middle at 30 feet and the ends at 10 feet the 7-Band antenna requires about 120 feet of ground space.

Buckmaster recommends: Our 7-Band 3,000 Watt model is our best all-around performer, it is a great combination of performance and capability. It works on 7 different bands with no tuner required, especially the popular 80, 40, and 20M bands. It doesn't require an amplifier, works just as well with a standard 100 Watt transceiver, but is ready for an amplifier whenever you are.

Our 300 Watt models are not upgradable so if you think you may buy an amplifier in the future, you would definitely want to buy 3,000 Watt model.
